Re: Community Well Water Use

Attn: Homeowner

The homes of Brandywine Drive Owners Assoc. share the use of a community well. In less than 1 month we have drained the well 4 times and has required the Association to purchase supplemental water to provide water to the community, as well as expensive service calls to our well management company.

In an attempt to figure out why we are using more water than what the well can produce, we have been monitoring the depth of the well water every morning and afternoon (see included chart). We will continue to measure the well to hopefully identify patterns in usage and ultimately avoid running the well out of water. The chart shows drastic usage spikes up to losing 3,100 gallons of water in 1 day.

The BOA board are working on ways to correct this concern such as; surging the wells to produce more water, or drilling a 3rd well to add to the 2 current wells and installing usage meters on each home.

We ask that you refrain from using our community well to fill or top off any pools or hot tubs, lawn irrigation systems and any excessive use of our community well.

Buxton Oil Company provides Pool Water deliveries if you require filling or topping off your pool or hot tubs.

If you have any questions, please direct them to one of your BOA Board Members

We appreciate your help and attention to this,

BOA Board Members

The BOA board are working on ways to correct this concern such as; surging the wells to produce more water, or drilling a 3rd well to add to the 2 current wells and installing usage meters on each home.

We ask that you refrain from using our community well to fill or top off any pools or hot tubs, lawn irrigation systems and any excessive use of our community well.

Buxton Oil Company provides Pool Water deliveries if you require filling or topping off your pool or hot tubs.

If you have any questions, please direct them to one of your BOA Board Members

We appreciate your help and attention to this,

Re: Community Well Water Use

Attn: Homeowner

The homes of Brandywine Drive Owners Assoc. share the use of a community well. In less than 1 month we have drained the well 4 times and has required the Association to purchase supplemental water to provide water to the community, as well as expensive service calls to our well management company.

In an attempt to figure out why we are using more water than what the well can produce, we have been monitoring the depth of the well water every morning and afternoon (see included chart). We will continue to measure the well to hopefully identify patterns in usage and ultimately avoid running the well out of water. The chart shows drastic usage spikes up to losing 3,100 gallons of water in 1 day.

The BOA board are working on ways to correct this concern such as; surging the wells to produce more water, or drilling a 3rd well to add to the 2 current wells and installing usage meters on each home.

We ask that you refrain from using our community well to fill or top off any pools or hot tubs, lawn irrigation systems and any excessive use of our community well.
